INDIVIDUAL ASSIGNMENT DECLARATION

Institution: Institut d'Enseignement Supérieur de Ruhengeri (INES-Ruhengeri)
Course: Artificial Intelligence — SWE 3513
Assignment: Individual Assignment 2
Project: Musanze Harvest Intelligence Service

Student information

- **Full name:** MANZI PRINCE Peter
- **Registration number:** ug25/28149
- **Institutional username:** ug2528149@ines.ac.rw
- **Individual verification code:** AI-A2-8149

Declaration of authorship and academic integrity

I, MANZI PRINCE Peter, declare that this submission is presented as my individual work for SWE 3513 Artificial Intelligence Individual Assignment 2.

The project implements a reproducible machine-learning pipeline for a synthetic potato-farming dataset inspired by the needs of a cooperative in Musanze, Rwanda. The system covers data generation, data validation, preprocessing, regression, classification, clustering, model evaluation, saved artifacts, command-line prediction, and a FastAPI service.

I understand that the generated dataset, model metrics, predictions, plots, and reports must correspond to my own registration-based seed and the results produced by my submitted code.

I acknowledge the importance of academic integrity and undertake to explain the implementation, justify model-selection decisions, interpret evaluation results, and make reasonable modifications to my code when requested by the assessor.

Declaration of AI assistance

I used ChatGPT as an assistance tool to help interpret the assignment requirements, organize documentation, and prepare supporting written material. I remain responsible for reviewing the material, verifying its accuracy against my implementation, understanding the submitted code, and ensuring that the final submission complies with INES academic-integrity requirements.

Any additional AI tools or assistance used in developing the implementation should be disclosed accurately in accordance with the institution's requirements.

Responsible AI commitment

I understand that the Musanze Harvest Intelligence Service is an educational prototype based on synthetic data. Its predictions are not validated agricultural advice and must not independently determine access to credit, insurance, public services, or other essential opportunities.

Any future use with real farms would require appropriate real-world validation, agronomic review, privacy safeguards, and human oversight.

Student confirmation

I confirm that the information in this declaration is accurate to the best of my knowledge and that I accept responsibility for the work submitted under my registration number.
